[Download](#)

A: Open this link. Download the ISO. Hint 1. Choose the option for the version of Office you want to install and format your drive. 2. Open Disk Cleanup, select the drive and choose Delete Files Older than. You can also select a longer age by using the slider. Click OK. 3. Let the installer install your copy of Office on your computer. 4. When it finishes, restart your computer. A: Microsoft Office 2007 This article also covers how to install Office 2007 on your USB device. However, I would like to emphasize that the Office 2007 you installed will only be usable on a Windows XP, Vista, or Windows 7 computer. A free program called the "Office 2010 Compatibility Toolkit" (from Microsoft) can enable a Windows XP computer to run the 2007 version of Office. This toolkit is available for download here: Microsoft Office 2010 This article explains the requirements for running Office on your USB storage device. It explains that there are three different ways you can run Office 2010: Pairing your device with a computer running Windows 7 Pairing your device with a computer running Windows Vista Pairing your device with a computer running Windows XP or Windows Server 2003 Microsoft Office 2007 This article explains how you can use your USB-based storage device as a "portable" version of the 2007 Office applications. This enables you to work with the Office applications without installing them on your computer. This allows you to carry your Office applications with you as a portable version of Office and use them on any computer, Windows or Linux.
