ImpressiDesk is a tool for the Windows operating system. It helps to reduce or eliminate the ink splashes and water spots from printed documents. The ink drops from the printer are deposited on the printed paper only in the very weakly colored areas.

The rest of the paper is still white, and this enables you to remove the ink smears while protecting this "white paper" in color. This method is called color separation, and it is used in colored printing to print different colored copies on paper of different colors. ImpressiDesk is available in both 32-bit and 64-bit versions and can be purchased in Standard and Developer/Branch versions. ImpressiDesk supports all standard printing methods: laser

printers, inkjet printers, and duplex inkjet printers. ImpressiDesk works with inkjet printers without using third-party software, and it works with both Windows 2000 and Windows XP. ImpressiDesk Description: - It is suitable for printers, plotters, multifunctional systems, and laser printers. - It produces noise-free copies at high speed. - It has an easy to use interface, and it runs on the Windows operating system. - It can
