Setup Total VPN Free VPN Streaming videos in the comfort of home Your internet connection can get you spoiled rotten by streaming just about anything these days. That is, if you want to watch the latest episodes of your favorite TV shows, follow the latest MMA fights, or listen to your favorite podcasts. However, there are certain content restrictions that are imposed by the service providers that restrict you from accessing certain websites or you might not be permitted to play online games. Fortunately, there is a solution to this problem. And, it's called a virtual private network (VPN). If you are wondering what a VPN is, then this article is going to shed some light on this practice. So, without further ado, let's have a look at some of the exciting features that come with a VPN. Total VPN Pro Privacy & Security Features With a VPN, you can privately browse the internet. Since you are using a Virtual Private Network, the data that you are sending over the internet is hidden and safe. So, by signing up with a VPN provider, you are allowing them to securely route your internet traffic to servers all over the world. This is a great way to access websites and information that are otherwise blocked by the service provider. When you connect your internet-enabled device to a VPN, you are effectively connecting your device to a server and thus, this server will be able to securely route your traffic to the internet. When it comes to the internet, there are various servers that are used to connect you to the internet. Unfortunately, these servers can be hosted by the government or other businesses who use them to censor any content that they do not agree with. Since you are using a VPN, you can ask it to connect your device to a server that is not owned by any single company or organisation. This will make sure that you don't get blocked or censored by any organisation when you try to access something on the internet. And, this is a major advantage of a virtual private network. Some VPN providers may restrict the regions that they service. But, in this modern age of the internet, it is a bit archaic. In order to keep up with the present times, the VPN providers are completely free to make connections to servers from anywhere in the world. And, in most cases, this is the only thing that they need to do in order to meet their standards of service. Total VPN Description: Why Use A VPN? Secure and Private Surfing
