X-BlogBridge Crack + X64

X-BlogBridge is a lightweight Windows application whose purpose is to help you group your RSS news feeds and generate statistics. Portable running mode The application is the portable

counterpart of BlogBridge, which means you can deploy it on your system without having to go through installation steps. You can copy it on portable media devices like USB flash drives and carry it with you. Clean feature lineup The GUI looks straightforward and easy to work with. Several tooltips are revealed in the main window for helping you view general details about the program's capabilities. All categories are displayed in the main window, along with details about the feeds and articles. You can arrange the feed groups in the desired order by moving them up or down. Define a new feed category You are allowed to create a new feed category by specifying the title, icon and feeds, keep reading lists, which are collections of feeds maintained by another party, and enable notifications. You may import feeds and subscriptions from OPML files or URLs, add data from Bloglines account, export the feeds information to OPML file format, update all group feeds with a single click, as well as mark as read/unread the selected group. Feed and article management options X-BlogBridge gives you the possibility to

subscribe to a feed, create a smart feed that collects articles that meet certain criteria, delete feeds, view feed properties, as well as rate them. What's more, you can make the application show all articles or only the unread or pinned ones, adjust the view mode (headlines, brief excerpts, or full text), and change the text size. Extra tools to play with X-BlogBridge helps you perform searches, view hot feeds for the current day or week, and generate graphs in order to check out information about the articles read by hour or day, most visited or read feed groups, and most pinned feeds. A cleanup wizard lets you get rid of the feeds that you no longer read using different filters, such as articles are older than a custom number of days and feeds have a low rating. An overall efficient RSS feed manager All in all, X-BlogBridge integrates a powerful suite of features and delivers a straightforward layout where you can manage your RSS feeds. X-BlogBridge is a lightweight Windows application whose purpose is to help you group your RSS news feeds and generate statistics.

What's New in the?

Who thought about blogging as a business? Blogging and websites were designed as simple sharing platforms where you can get free online resources and spread information, that is what websites and blogs are for. In this day and age we live in we blog just because we can, and we enjoy it, however some people see blogging as their full time job. They read blogs all day long just so that they can make money from it. To be honest, I don't like this idea. There are times when you may be forced to make

blogging your profession, for example if you are a food blogger. Or, in other cases if you are running a site that you want to make money from. I have had several cases where I was asked to blog more often, and I would be told that I need to boost my traffic so that I can make money, and that I should go on some type of marketing campaign. I've told them that it is not that easy to make money from a blog, and that they need to stop demanding all this from me. I tell them that if I am not blogging, I have nothing to blog about. I decided to make this small tool that can help you analyze what your blog is doing wrong. With this tool you can check how your blog is doing, if it is still posting articles, and you can go and make some changes if necessary. With X-BlogBridge you can check all these information: - How often are you publishing articles? - Are you publishing at least one article a day? - What are your most read articles? - What are the best time slots to publish articles? - Do you have visitors? - What is the traffic for your blog? - How many new subscribers are you getting? - And many more! X-BlogBridge is a

lightweight Windows application whose purpose is to help you group your RSS news feeds and generate statistics.
