Based on the diffraction theory, a numerical simulation is performed to show that the diffraction pattern of the transverse-electric (TE) polarized light from a subwavelength grating is free from distortion due to the aberration. As such, this work provides a theoretical framework for the fabrication of a distortion-free diffraction grating. The theoretical model is verified by a numerical simulation of a two-dimensional grating. The results of this study may be helpful for the practical application of high-performance diffraction gratings, especially for those used in optical devices with a curved surface.Darwin Moreno Darwin Moreno Castañeda (born 12 April 2001) is a Uruguayan professional footballer who plays as a defender for Unión Española.
