A: / is not a valid path. Change it to a valid path, for example /book.docx. Students and faculty, eager to get their hands on one of the franchise's top-selling items, descended on the Big Apple on Monday morning to purchase the official Apple iPhone 5. Nearly a million people tried to take part in the online Apple iPhone 5 pre-order special, set to kick off at midnight local time. Some 500,000 were expected to hit the stores in the country, according to people familiar with the matter. A surge of orders surged in the U.S. and Europe on Sunday night,

and the frenzy continued into Monday morning in the U.K., with shops and online sellers struggling to keep up with the demand. Wong Tai Sin district, the 2nd busiest shopping district in Singapore, displayed the most up-to-date line for iPhones 5. Media reports said even more stores are expected to remain open for extended hours. In Beijing, a Sina Weibo user said that people in the city were waiting in line for hours at the Apple retail store at the Parkview Mall. Many customers were not prepared for the expectation that they would wake up to a very special day. My sister & I woke up at 8:30 and walked to the mall. It already took 1.5 hours. #apple — Xin Zhao 笑笑 (@zhao) September 15, 2012 The enormous demand is probably due to the fact that the smartphone is the company's first ever iPhone in which the screen is transparent, allowing users to touch its display as well as use the device's features. Apple CEO Tim Cook said the company set a goal of selling a million iPhone 5s by the end of the first weekend and that the company was very close to achieving the target. "I'm extremely proud and honored that Apple customers are embracing the iPhone 5," Cook

said in a statement. “Our pre-orders set a new record, and we’re off to a great start in markets around the world.” Shipments of the iPhone 5 are expected to begin on Friday morning in the U.S. and on Monday morning in China. By Erica Fong and Tanya Chen

The aim of this study was to improve the signal-to-noise (S/N) ratio in helical SPECT by using a non-uniform sampling strategy (NUS) method. This method has not been used in helical SPECT, because all projections are uniformly sampled. A NUS method was applied to helical SPECT in combination with pinhole imaging. The helical pitch was varied from 2.5 to 3.5 cm for each patient. The NUS strategy was applied to the conventional chest SPECT using the pinhole collimator. The AUC (the area under curve) was calculated from planar images obtained by these two strategies to evaluate the performance of the NUS method. There were no significant differences in the AUC between the uniform helical and NUS chest SPECT, and the NUS strategy provided the highest S/N ratio. This study suggests that the NUS strategy could improve the S/N ratio of helical SPECT images.

The Apoptotic Sub-lethal Dose of Acrylamide Induces Autophagy and Increased Expression of LC3 II in Human Hepatic Cells. The objective of this study was to find the sub-toxic

dose of acrylamide (AA), which causes in the liver the cytoprotective response of autophagy, oxidative stress and apoptosis. We used HepG2 cells as a model of human hepatic cells.

Acrylamide was added to the culture in various concentrations from 5 to 300 μM . The cells were incubated for 24 h, then the expression and the distribution of autophagic markers LC3 and p62 were investigated by immunocytochemistry and

Western blotting. The results showed that AA caused a significant increase in the LC3II/I ratio, in contrast to a decrease in the p62 protein level. The fluorescence intensity of LC3 staining also increased. Moreover, AA induced activation of caspase-3, which mediates apoptosis. These findings
